Yamaha 125cc: The all-round experience.

At Yamaha we believe you get out what you put in, and with over half a century of innovation in motorcycle manufacture that means some pretty special machines. The 125cc range embodies the values of freedom, fun and fulfilment, each one built with the same passion that comes from decades of competing and winning at the highest level.

Forging new technology and bringing it to the road is what Yamaha is all about. Our 125s do more than just look the business, they do the business – day in, day out. Covering every need from simple economy to custom luxury, they'll take you places other 125s wouldn't dare.

Economical 4-stroke, fuel-injected engine

The YBR125 runs a 4-stroke, fuel-injected engine bringing the dual benefits of cutting back on emissions and delivering a smooth throttle response.

Lightweight, diamond-shaped chassis

Weighing in at 125 kg, the diamond-shaped steel chassis of the YBR125 is rugged yet lightweight. The combination delivers assured road handling and easy steering, as well as great suspension for a more comfortable ride.

Smooth braking

A powerful 245 mm single-disc front brake works in tandem with a 130 mm drum rear brake to deliver smooth, effective stopping. Whatever the conditions, riders can put their faith in Yamaha's advanced engineering.

Roomy, dual seat

Whether you're riding solo or with a passenger, the sculpted dual seat offers plenty of space to find a comfortable riding position that works for you. Grab rails on the rear luggage carrier mean you can both relax and enjoy a safe, smooth journey.

Clear analogue instrument panel with RPM meter

The 2010 YBR125 features new modern-design analogue instrumentation including an RPM meter which helps when getting to know the engine, and a speedometer, while a fuel gauge completes the easy-to-read dash setup.

Alloy wheels

The YBR125's 5-spoke cast alloy wheels don't just look good, by minimising unsprung weight they contribute to the bike's lightweight and agile handling.
